Systems & Symbiosis

A Clinical **Repertory** of the Bowel Nosodes of Bach & Paterson

Compiled and Edited by Dr R. Malcolm

How much Physick has been obstructed for want of exactness in [recording the features that] many Diseases show, the cures we would not now need to seek, if Writers, in communicating their experiments and observations had not took one disease for another: And this, I suppose, is the reason why the Materia Medica is so wonderfully increased, and to so little purpose.
... the Physician ought to mind carefully the particular events both of method and remedy, which he uses in the cure of diseases, and to lay them up for use, both to ease his memory, and to render him more skillful ...

From: Dr Sydenham's *Practice of Physick* 5th ed. Trans. John Pechey 1712

The Bowel Nosodes of Bach & Paterson and the Repertory

This book is a clinical reference tool. It has been compiled to assist clinicians to identify an appropriate homoeopathic bowel nosode, for patients in whom these medicines are indicated.

The data

At first glance, the remedy data for the bowel nosodes seems too vague and general to be of clinical value. The leading symptoms and keynotes can rarely be classed as ‘strange’, or ‘peculiar’. So bowel nosodes are not usually ‘jumped to’ on the basis of a single strong feature in the case. A variety of inductive methods (based on the context) are required. It may also be necessary to undertake more than one form of analysis using the available clinical data.

Empiricism

The data for the remedies themselves is highly empirical. Most of the patients, for whom they have been prescribed in the past, have been chronically unwell, or at least sub-acute. The remedies themselves cannot all be said to have undergone a standard proving, although careful clinical observation and stool culture data lends some objectivity to Paterson’s case series.

The priorities of Bach and Paterson were, as far as possible, to establish a scientific basis for the selection of bowel nosodes. Whether it was this priority, or a general lack of keynotes, (in what was a chronic and often debilitated patient sub-population), we find that ‘leading symptoms’ for the bowel nosodes are in short supply. However, what information there is - in the opinion of this author - more reliable than much of the proving data in the *materia medica* as a whole.

Repertories

Most modern repertories have imported the bowel-nosodes into their rubrics, but no one appears to have marked up the rubric entries as they are clinically verified, in spite of the considerable number of cases that have appeared in the journal literature over the last fifty years. As a result, these medicines are almost never been elevated above ‘normal type’ in the standard repertories of the present day.

This low-key representation, together with the small overall number of symptoms, means that these nosodes almost never turn up in a totality analysis. ‘Broad sweep’ repertorisations, which analyse only large headline rubrics, do not bring them out. Expert systems and family group searches often fail to show them up, even in those patient analyses where they are clearly indicated and ultimately shown to be effective.

Approach to Case Analysis

Given the poor representation of the nosodes in the general repertory, it may be wise to undertake two separate analyses, in those cases where the bowel nosodes are clearly indicated. (See Section 5 *Systems & Symbiosis - Core Text*)

In one analysis the clinician would use traditional methodology (whether it be totality, thematic, pathological or synthetic) in order to identify the range of potential ‘classical’ similia.

In the other analysis, you would use this specialised repertory to assess which nosode is most likely to address the *systems disturbances* relating to the patient’s dysbiosis.

You might use the results of the classical analysis to weight the search in favour of known remedy-nosode relationships.

As you become more familiar with the nosodes and their related medicines, these two repertorisations will inform one another. So, for example, if your ‘traditional’ analysis yields *Phosphorus*, *Silica* or their salts, you will probably use the nosodes analysis to assess whether *Gaertner* is indicated.

With experience you will come to use these empirical relationships to good effect, using the remedies sequentially to ‘unblock’ the case or augment the response of each to the other.

Structure of this repertory

The repertory in this book conforms to the search-word and chapter conventions of modern clinical repertoires (based on Kent’s *General Repertory*). Because the listings are short, it takes only a few minutes to do a hand repertorisation on the nosodes. Blank analysis grids are provided at the back of this book. These may be copied and used as part of the patient case record.

Analysis methodology

Unless you are very clear that an uncommon symptom is unique to a remedy you would be wise to keep the analysis general and favour the head rubrics. The more unusual the feature, the more likely that the data is derived from a single case study, and potentially the same symptom could arise from time to time in patients who are sensitive to a different nosode.

So beware, don’t use small rubrics to exclude remedies. Use them only to lend support. Nosodes which do not appear in the listing for a common feature are easier to exclude.

Beware that ‘small’ nosodes like *Bacillus-10*, *Faecalis* and *Mutabile* are severely under-represented, even in a highly selective bowel nosode repertory like this. They have been used very rarely and have therefore generated much less data than their counterparts. If an analysis throws up three points of contact with *Bacillus-10*, as opposed to six for *Morgan pure*, you should consider *Bacillus-10* quite carefully and read the *materia medica* of the remedy.

The table below gives an indication of the case data attributed to each remedy, from the two main sources of clinical data in this repertory. Note that *Dys co* was extensively used by Thomas Dishington. Since we have no knowledge of his case numbers it is not possible to assess their influence on this body of data.

	John & Elizabeth Paterson number of cases	Russell Malcolm number of cases	Totals	Percentage of case literature
<i>Bacillus 7</i>	9	7	16	4 %
<i>Bacillus 10</i>	5	4	9	2 %
<i>Dys-co.</i>	14	12	26	6 %
<i>Faecalis</i>	0	3	3	< 1%
<i>Gaertner</i>	11	5	16	4 %
<i>Morgan-co.</i>	0	3	3	< 1%
<i>Morgan gaertner</i>	69	8	77	18%
<i>Morgan pure</i>	156	10	166	40%
<i>Mutabile</i>	0	3	3	<1%
<i>Proteus</i>	13	5	18	4%
<i>Sycotic co</i>	53	27	80	19%
TOTALS	330	87	417	100%

Editorial notes on the listing conventions used in this repertory.

Most of the remedy listings are in ordinary type . The font is Times New Roman.

Occasionally, where a symptom-remedy relationship is strongly emphasised in the existing case literature, AND has been confirmed in the experience of the author, the remedy will be elevated to *Italics*.

Where remedies are listed in brackets: eg. (Mut.), the feature has been strongly noted in one or two of the authors own cases. However, it cannot yet be inferred that the symptom in question it is always a reliable indication for that nosode.

Sometimes a remedy is listed in brackets thus '(Gaert) ...' is used to indicate a particular observation by the author. It should be read to imply that a previously unlisted symptom was associated with this remedy in one or two cases. It is highly likely that the symptom is not exclusive to the remedy shown and will be found to relate to other nosodes over time. Do not use these rubric entries to eliminate other treatment possibilities. However, you may choose to use this kind of listing to weight a particular remedy choice when the analysis is otherwise equivocal.

Please feed back your experiences so that this repertory can be developed further.

FOOD & DRINK continued

tea:

aversion: Bacls-10, Syc.

tomato:

aversion: Bacls-10, Syc.

vegetables:

aversion: Syc.

vinegar:

aversion: Syc.

GENERALITIES continued

Gastro-enteritis, after: Dys.⁷, Gaert.⁷

Gout: Bacls-7.

Heat, flushes of: Dys., Morg-p.
excitement from: Dys.
menopause at: Morg-p.

Hypertension: (see GENERALS, blood pressure, high)

Inflammation:

lymph glands: adenitis: Morg-p.
muscles: myositis: Syc.
periosteum: Dys., Morg-p.
veins: Morg-p., Prot.

Lean people: Dys¹²

Malignancy: (see GENERALS: Cancer)

Mycosis: Syc¹²

Obesity: Syc.

Old; age, premature: Bacls-7¹²

Osteoporosis: Bacls-7, Dys., Morg-p.

Partial responses to remedies, after:

arsenicum iodatum: Bacls-7⁷
calcarea silicata: Syc⁷
china off.: Dys.⁷
isopathic house dust mite: Syc.⁷
medorrhinum: Mut.⁷
moschus: Bacls-10⁷
nux vomica: Prot⁷
phosphorus: Gaert.²

Peripheral nervous system, actions of: Prot.

Pneumonia; never well since: Morg-p¹²

Pregnancy, after: (Bacls-10⁷, Dys.⁷)

Progestogenic phenomena: Bacls-10⁷

Pulse:

rapid: Dys.
slow: Bacls-7.

Purgation after: Syc-co.⁷

Reaction, lack of: Gaert. Morg-g¹²

Sensitive:

cold, to: Bacls-7.
cold damp, to: Bacls-7.
light, to: Prot,
sun, to: Morg-p
ultra-violet light, to: Prot.
wool, to: Morg-p

Siezures: (see HEAD, CNS affections of)

Softening; Bones: Dys¹²

Syncope: Bacls-7.

Sudden: symptoms, appearance of: Prot.

Swelling; Glands: Syc¹²

Spasmodic symptoms: Prot.

Tension; Muscles: Dys¹²

Thin: Dys., Gaert, Prot.

Thyrotoxicosis: Dys.

Trembling; excitement, from: Dys¹²
intention tremor: Dys¹²

Uncovering; kicks covers or clothes off: Dys¹²

Vaccination, after: Syc¹²

Warm room agg.:Dys.

Weakness: Bacls-7. Dys¹² Syc¹²
- enervation; exertion from; slight: Bacls-7¹² mut¹²

Weather:

storm; agg.; approach of: Dys¹²
wet agg: Bacls-7, Morg-p.

Wool agg.: Morg-p.

PAIN

Abdomen: Dys., Morg-g, Prot.

Ankles, painful: Dys.

Arms: Morg-p.

Calf, painful: Prot.

Cardiac region: Dys.

Chest: Bacls-7, Dys. Morg-g, Prot.

 cold agg: Prot.

 extension, on: Dys., Prot.

 neuralgia, intercostal: Morg-g.

Pectoral: Morg-g.

 shingles, since: Morg-p.

 sudden: Dys.

Epigastrium: Dys., Morg-g., Morg-p. Syc.

Eyeballs: Syc.

Feet, painful: Bacls-7, Syc.

Fingers: Morg-g.

 joints: Morg-p.

 thumb: Morg-g.

Gall bladder: Bacls-7, Morg-g., Morg-p.

 gall bladder over: Dys.

Hands: Morg-p.¶

Heels: Morg-p.

Hips: Bacls-7, Gaert.

 fixed, left side: Bacls-7.

 right side: Bacls-7.

 stabbing: Bacls-7.

Hypochondria: Morg-g, Morg-p.

 left: Morg-g, Morg-p.

 right: Morg-g., Morg-p.

Iliac fossae: Bacls-10, Morg-p, Prot., Syc.

 Midnight agg.: Dys.

 Vomiting agg, Dys.

Iliac region: Morg-g.

Joints: Morg-p.

Kidney: Syc.

Knee: Dys., Morg-p.¶

 Grating: Morg-p.

Liver: Morg-p.

 Liver region: Bacls-7.

Loins: Syc.

Lumbo-sacral: Syc.

Lungs, right base: Syc.

Metatarsal bones: Syc.

Metacarpo-phalangeal joints: Morg-p.

Neck,

 beginning to move agg.: Morg-p.

 heat agg.: Morg-p.

 moving amel:Morg-p.

 night agg.: Morg-p.,

Neuralgic:

 facial: Syc.

 left side face: Morg-g.,

 intercostal: Morg-g.

 orbital, supra and infra: Dys.

 post herptic: Morg-p.

Nose:

 Dys.

 root of: Dys.

Rectum:

 Syc.

 splinter, as if: Syc.

Shoulders:

 Morg-p.

Shoulder blade:

 Morg-g., Syc.,

 left side: Morg-g., Syc.

 right side: Morg-g.

Soles:

 Syc.

Stomach:

 Dys., Gaert.

 burning: Morg-p., Syc.

 hungry, as if: Prot.

 eating does not amel.: Prot.

Thighs

 pain before menstruation: Dys.

Vulva:

 Bacls-7,

Sources

Unmarked sources should be regarded as Bach & Paterson for the time being, until such time as they have been verified to source.

Remedies marked 12 should be considered to be taken from various authors, until they have been verified to source.

Relationship scoring guide	Key to remedy weightings in the rubrics of the nosodes repertory								
3 known response to strongly associated remedy	3 = patient's symptom or feature is italicised in the materia medica for the nosode								
2 known response to weakly associated remedy	2 = patient's symptom found in majority of Paterson's cases for that nosode								
1 patient shows multiple features of an associated remedy	1 = patient's symptom or feature listed in plain type in the materia medica of the nosode
