

Galen Ives BSc MSc CSci CPsychol AFBPsS

Trained initially in psychopharmacology, Galen's career has been in clinical psychology, as a clinician, researcher and as a Court expert witness. As a Chartered Scientist, he has maintained an interest in the research background to homeopathy for many years, as advisor to the Blackie Research Foundation, a board member of GIRI and a member of the Research Subcommittee of the European Committee for Homeopathy. He was the Blackie Memorial Lecturer in 1999. Now retired from clinical work, he currently holds two University appointments, Queen's University Belfast (teaching) and the University of Sheffield (research).

On-Line Course in Medical Homeopathy, Friday 2nd July, 3.30 p.m.

Synopsis

Critics of homeopathy frequently assert that there is "no evidence" to support homeopathy's claims. This talk will present a summary of the scientific evidence which does exist from a variety of disciplines – physics, chemistry, botany and zoology – proving that whatever it is, the homeopathic potency definitely exists. The latest research, providing hints as to the physical form of the potency, will be presented.
